

FAST, QUALITY RESULTS FOR PATIENTS AND PHYSICIANS

Winscribe Dictation for the Healthcare Enterprise

Winscribe Dictation offers you a departmental or enterprise-wide software solution that covers all your digital dictation and workflow management requirements while providing full patient data security levels. This results in accelerated processes, a higher number of patients that can be treated, reduced waiting times, a faster return on investment (ROI) and overall improved patient care.

Mobile Digital Dictation Whether your medical specialists are on the move between different sites, on the way to a congress, at home or at their desks, the modern healthcare organization needs to be flexible to accommodate the demand for mobile dictation in order to keep productivity at a high level. The Winscribe Mobility Suite allows you to dictate your work on the move, anywhere anytime, with all the capability of desktop digital dictation on your hand, whether you are using BlackBerry, iPhone or a Windows phone.

Winscribe's Telephony option allows you to create and send dictations using any type of mobile or fixed line phone. Staff can dictate their work from any location by dialing a pre set up phone number, and simply following Winscribe's standard voice commands to record and send for transcription. For maximum efficiency, custom prompts can be created to provide voice forms that deliver a series of automated verbal cues so a pre-structured template can be completed with the answers supplied.

Integration With Existing Data Systems Integration with various patient data systems not only speeds up the workflow, it also ensures that input information is consistent between systems. A web services-based integration tool offers you the advantages of a totally integrated digital dictation solution based on advanced integration architecture. By providing 'open standard' development tools and integration with HIS, RIS and

"The whole system really has made us more efficient and we're able to serve our patients even better than before. I would certainly have no hesitation in recommending the system to other would be users."

EPR systems, the benefits of a totally integrated solution for two-way exchange of patient demographic and report tracking information become available.

Optimized Dictation Workflow

Efficient management of your workflow involves streamlining your document creation process as well as promoting work sharing. The elimination of task repetition as well as streamlining of processes can offer dramatic cost savings to your organization. Winscribe has developed smart document management solutions that allow you to reduce document turnaround time and increase operational efficiency. The reporting available within Winscribe Dictation allows you to proactively identify and correct bottlenecks by analyzing individual and group workloads in real time and to assign transcription jobs accordingly.

Speech Recognition is an optional solution that gives you the opportunity to further increase time and cost savings associated with digital dictation. Speech recognition technology can recognize the words you are dictating and 'type' them for you. The two possible approaches are: 'Client-side' speech recognition that allows you to see and edit the words as they appear on your computer whilst you are dictating your job. With a 'server-side' solution your job is

sent to a server for recognition before being routed to a transcriptionist or other destination in the flow of work. Both optional methods can be used independently or combined to make document creation more efficient for you.

Software On Demand With Winscribe On Demand we will manage all software and servers for you which saves you the need to buy, install, maintain or upgrade any of these. Instead, you can rapidly improve business performance through the Software as a Service (SaaS) model since capital expenditure for software and servers is eliminated, IT resource needs are reduced, and deployment is accelerated.

Protect Patient Information Since patient confidentiality is a critical issue in the healthcare enterprise, Winscribe Dictation uses state-of-the-art encryption technology providing exceptional security levels for voice and data traffic, enabling your organization to meet and exceed relevant government regulations.

Try Before You Buy Winscribe offers you the opportunity to try the Winscribe Dictation products before you buy. Visit www.winscribe.com to request your free trial of the Winscribe product suite.
